ENGLISH ABSTRACT

(11) Number of the patent document **2115246**

(13) Kind of document **C1**

(14) Document date **1998.07.10**

(19) Publishing country or organization **RU**

(21) Application number registered **97105517/09**

(22) Application filing date **1997.04.07**

(45) Date **1998.07.10**

(516) Edition of IPC **6**

(51) Main classification IPC **H04J3/17**

Title **METHOD OF TRANSMISSION OF DATA PACKS IN GENERAL- PURPOSE COMMUNICATION CHANNEL AND CONTROL DEVICE**

(71) Applicant information **Voennaja akademija svjazi**

(72) Inventor information **Kolesnikov V.B.**

(72) Inventor information **Sharov A.N.**

(73) Grantee (asignee) information **Voennaja akademija svjaz**

ABSTRACT:

FIELD: communication, applicable in radio communication networks with pack switching. **SUBSTANCE:** after check-out of condition of general-purpose communication channel data pack priority pulses are

formed at duration $\Delta_{T_{j1}}$, where $l \in (1, 2, \dots, L)$, l - number of data pack priority, L - number of the lowest

data pack priority, and j - number of pack radio communication installation, $\Delta_{T_{j1}} > \dots > \Delta_{T_{jL}}$ and $0 < T_{j1} < T$, where T - duration of operating cycle of communication channel, at the same time a random pulse

with a duration of Δ_{t_c} is generated with equiprobable law of its distribution in time interval $]0, T[$, and if

condition $\Delta_{t_c} \in]0, T[$ is fulfilled, an enabling signal is generated, otherwise the actions in formation of enabling signal are repeated in the next clock of operation of communication channel. **EFFECT:**

enhanced capacity of general-purpose communication channel at transmission of data packs with different categories of urgency in conditions of high information load. 4 cl, 14 dwg
